

Olympus EndoSite® Consulting

Operations and Efficiency Analysis

**Reducing costs,
increasing access.**

The challenge.

Increasing capacity by just one procedure per day can increase access to live-saving procedures. Unfortunately, too many facilities waste time and funds due to bottlenecks in patient flow, underutilized resources, and other inefficiencies that can have a detrimental impact on staff and patient satisfaction.

The Olympus consulting approach.

Olympus EndoSite Consulting has the tools and expertise to help facilities like yours reduce costs, increase productivity, enhance patient care, and optimize efficiency. The Operations and Efficiency Analysis is a tailored review of your facility's current operational protocols, practices and logistics to identify current constraints and opportunities for improvement. Our approach compares benchmarks and best practices developed from our comprehensive database. That data is augmented by corporate intelligence to produce clear, actionable recommendations that are proven to produce results.

The Olympus difference.

You'll get an objective analysis.

While you might be aware of inefficiencies at your facility, you may not have the resources or data to identify them or create effective change. As an objective third party, Olympus Endosite Consulting can uncover the key issues and provide quantified recommendations.

We can adjust our scope.

We can provide either a comprehensive study with an analysis of your entire facility, or a version that focuses on the identified key areas of need.

We'll help with implementation.

Too busy or unsure how to implement? Our Nurse Consultants can implement the recommended changes, leveraging our experience to deliver solutions custom-tailored to your facility.

How can we help you?

EndoSite Consulting offers a comprehensive range of professional services. For more information about how we can help you drive strategic planning and development, optimize operational performance and efficiency, and enhance patient satisfaction, please contact the Clinical Support Department at 1-800-387-0437, Ext. 703126 or contact your local Olympus representative.
